

AZ-900 Crash Course

Day 02

Reza Salehi

Unanswered Questions
Thank you all for the great questions!

21 U 1 On the MicroAZ-900 exam page there is a mention about change in exam scope beginning this month. What are these changes.

- Please see this document for updated scope
<https://learn.microsoft.com/en-us/credentials/certifications/resources/study-guides/az-900>

23 G H Can you resell your reservations in the market of other customers?

- Unfortunately no. You can “return” or “exchange” them under certain conditions. See
<https://learn.microsoft.com/en-us/azure/cost-management-billing/reservations/exchange-and-refund-azure-reservations>

24 G H Do you get prior notice to shut down and maybe save data when using spot , before kicked off?

- Yes, 30 seconds! , as per Microsoft: “You can opt in to receive in-VM notifications through Azure Scheduled Events. This will notify you if your VMs are being evicted and you will have 30 seconds to finish any jobs and perform shutdown tasks prior to the eviction.” See
<https://learn.microsoft.com/en-us/azure/virtual-machines/spot-vms#eviction-policy>

: Is there a decision workflow that walks you through which storage or other service options you should use, based on your inputted requirements and cost considerations you entered into a workflow questionnaire? Not just within, say Cosmos DB, but across DB platforms?

- No, there is no Microsoft-owned tool that does it based on my knowledge. Maybe “Microsoft Copilot for Azure” in the future <https://techcommunity.microsoft.com/t5/azure-infrastructure-blog/simplify-it-management-with-microsoft-copilot-for-azure-save/ba-p/3981106> . I can not speak for third-party tools, so you might want to do a bit of research on it. At the end of the day, this is the job of an Azure Architect.

K K

What is the difference between Azure power shell and Bash

- Both are command-line tools to manage your Azure subscription. You can choose either one based on your comfort level. See <https://learn.microsoft.com/en-us/cli/azure/choose-the-right-azure-command-line-tool>

Thanks!
